

Creating a small bird habitat haven

www.habitatnetwork.org

Your habitat haven may be as big or small as your garden will allow. It may be a pie-shaped wedge in a corner or long and narrow or just the protective spiky circle.

Inner sanctum

Taller, softer shrubs 1-2 meters in height. Provides a safe haven away from bigger birds. A vine may be grown to provide a protective cover, however may be difficult to manage.

Pomaderris, native *Grevillea*, *Ozothamnus*, *Leptospermum*.

Protective circle

Spiky, protective shrubs 1-2 meters high, planted 20 to 25 cm apart.

Hakea, *Acacia ulicifolia*, *Bursaria*, *Banksia*, *Lambertia*.

Biodiverse shrub circle

Small, attractive shrubs add interest to a garden for people, birds and animals. This layer provides food and shelter.

Dianella, native *Geranium*, *Indigofera*, *Prostanthera*.

Eating out

Mixed native grasses and ground covers offer a variety of foods from seeds to insects.

Pratia, native *Violet*, native *Geranium*, *Microlaena*.
